

SHI SMART INSIGHTS

Smarter Technology Decisions, Smarter Procurement & Smarter Security

Making smarter technology decisions involve having reliable data, sound advice and a thorough understanding of your available options. That’s why thousands of organizations, like yours, partner with SHI’s ridiculously helpful experts to explore solutions best suited for their needs.

And that partnership just got even more powerful with SHI Smart Insights – the fastest way to help you better understand your current IT estate.

WHAT IS SHI SMART INSIGHTS?

SHI Smart Insights is a solution that helps you identify opportunities to optimize costs, minimize risks and explore how new technology adoption can increase the value of your technology investments.

With SHI Smart Insights, you get much more than a tool. It’s an entire experience that puts the full breadth of SHI’s expertise in end-user computing, networking, data center, cloud and security at your disposal – all with the common purpose of helping you make smarter technology decisions.

Yes, we have dashboards. But more importantly, we use the data collected through the program, combined with an understanding of your business, to provide tailored advice. A tool alone will never be able to do that.

SHI SMART INSIGHTS HELPS YOU:

Gain full visibility of important IT assets

Access an accurate view of deployed hardware and software without deploying invasive agents on your network.

Understand usage & performance

Monitor physical and virtual asset consumption over 20 days, highlighting underused hardware and software on-premises and in the cloud.

Identify security risks

Pinpoint end of life hardware and software on your network with known security issues, helping you close potential avenues of attack.

Build a cloud journey

Assess current on-premises workloads and, if suitable, explore a cloud migration journey, including recommendations for hardware and subscription types.

HOW IT WORKS

Our online configuration and self-service portal helps you get started in minutes.

Agentless data collection makes life easier.

Reliable data and expert advice help make better decisions about budgeting, governance, security and cloud.

For the best results, scan for about 20 days.
