

AI-powered meeting room solutions

Build meeting rooms designed with end users in mind.

Enterprise IT teams are under increasing pressure to deliver seamless hybrid meeting experiences, yet outdated audio-video systems continue to fall short of modern expectations.

SHI's AI-powered meeting room solutions eliminate operational pain points through strategic integration. Our certified solution architects leverage deep partnerships with OEMs that integrate seamlessly with your existing architecture and collaboration platforms, significantly reducing support tickets and maximizing user adoption. Our recommendations are driven by site surveys and usage analytics, ensuring every meeting room is optimized for your unique requirements and existing layouts.

SHI's meeting room solutions

Our experts ensure enterprise-grade experiences that scale with your organization.

- **Envision and design:** We optimize room layouts and technology selection to maximize both user adoption and ROI, ensuring intuitive controls so meetings run smoothly – without the need for extensive training.
- **Comprehensive lifecycle support:** From initial planning to deployment and ongoing management, SHI provides continuous monitoring, environmental health checks, and responsible break/fix support to minimize downtime and keep spaces operational.
- **Seamless integration:** Our solutions are engineered to work with your existing infrastructure, reducing disruption and accelerating time-to-value.
- **Security and compliance:** SHI prioritizes enterprise security and compliance standards, so your meeting rooms remain protected.

AI-powered meeting room features:

- **Dynamic video framing and voice location** ensure remote participants always see and hear the speaker.
- **Noise suppression** eliminates HVAC and hallway noise, elevating meeting quality for remote attendees.
- **Smart room booking analytics** uncover underutilized spaces, streamline scheduling, and maximize return on investment.
- **Integrated environmental sensors** allow IT to monitor and adjust lighting, temperature, and air quality remotely to ensure comfort.
- **Live transcription and translation in over 100 languages** enable global teams to collaborate in real time, reducing meeting follow-up.
- **AI-generated meeting summaries** increase accountability and reduce the need for manual notetaking.

Deliver measurable value through a proven methodology.

Our approach ensures successful deployment regardless of maturity level. Before making recommendations, our experts make sure to have a deep understanding of your environment.

 Envision and design	Strategic workshops to find tools	AI use case exploration	Meeting space optimization
	Technology demos and POCs	Site surveys	Solution architecture
 Procure	Financing options	Enterprise procurement	Curated technology selection
	Device as a Service options	Lifecycle services	Streamlined purchasing process
 Deploy and adopt	Testing and training	Deployment roadmap	Structured adoption programs
	Certified hardware installation	Infrastructure integration planning	Operational installation
 Run and maintain	End-user support	Remote monitoring	Asset management and reporting
	Continuous improvement	Vendor coordination	Scalability and refresh planning

All solutions delivered through certified partnerships:
