

Endpoint detection and response

Protect your endpoints with SHI's expert practitioners and labs

SHI's cybersecurity solutions team is at the forefront of providing effective strategies to help you choose the perfect endpoint detection and response (EDR) solution.

Our experienced practitioners are equipped to assist with assessments, workshops, and vendor-neutral labs, delivering data-driven security insights.

Why work with SHI to review your endpoint security

Expertise, partnership, and labs

SHI Labs can demonstrate real-time results of the solutions' security efficacy and provide custom scorecards of each solution to help you understand how they fare against actual security incursions.

Benefits

- Endpoint briefing
- Endpoint workshop
- Strategic planning
- Product demos
- Head-to-head use case validation
- Live malware scenarios

Endpoint briefing

We provide vendor-neutral knowledge share on Endpoint Protection Platforms (EPP) and techniques used to evaluate potential solutions.

Endpoint workshop

Our team identifies security needs and business objectives, then maps the findings to a platform that best fits the current environment.

Strategic planning

Our recommendations are based on solutions that can increase your existing security posture to ensure optimal efficiency and effectiveness.

Product demos

Within the SHI Lab, we demonstrate security resilience of the solutions and identify emerging threat vectors and potential vulnerabilities.

Head-to-head use case validation

With multiple products in the lab, we can evaluate the same use cases across competing platforms, ensuring the product functionalities and outcomes are reliable and consistent.

Live malware scenarios

SHI can create virtual machines in the SHI Lab, expose them to malware, and assess the product's effectiveness in threat prevention, detection, and response.

Contact an SHI specialist to arrange your EPP consultation.
