Digital workspaces

Empower end users with secure, AI-driven digital workspaces that boost productivity.

In today's evolving workplace, delivering secure, intuitive digital experiences is increasingly challenging. Employee device preferences, BYOD, AI-driven workflows, and hybrid work have created complex ecosystems that strain IT resources. As organizations prioritize security and productivity, many are turning to digital workspaces to simplify and standardize the end-user experience.

SHI works with your stakeholders to design and deploy the right digital workspace solution for your environment. Digital workspaces provide secure, unified access to apps, files, and collaboration tools on any device — while giving IT centralized visibility and control.

Why digital workspaces?

Digital workspaces improve the employee experience with a single, unified platform for all apps and tools. For IT, they consolidate device, app, endpoint, and user management into one environment. Automated workflows and cloud-based controls reduce manual effort, lower support ticket volume, and free IT to focus on strategic initiatives.

Integrated AI further enhances efficiency through adaptive authentication, continuous security, virtual assistants, predictive resource allocation, device health monitoring, and contextual insights.

What digital workspaces deliver

- Full desktop experiences via VDI, secure enterprise browsers, and modern endpoint management

- Strong security through role-based access, continuous monitoring, and rapid threat response

- Streamlined communication and collaboration experiences Simplified IT operations with cloud-based management and automation

- Flexibility across multi-OEM device environments

- Personalized access to apps and tools for better employee experiences

- Secure enterprise browsers for zero-trust access to apps and data, directly from browsers

Our premier digital workspace partners include:

Citrix Workspace

omnissa™

Microsoft 365

amazon WorkSpaces

Google Workspace

DIZZION

Digital workspaces
Create flexible, efficient, and secure workspaces
for hybrid and remote users.

SHI's approach

With 35+ years of expertise and deep vendor relationships, SHI helps you plan, build, and deploy digital workspaces that elevate the digital employee experience. Our modern workplace experts follow industry best practices and work with leading providers to deliver a solution tailored to your needs.

Strategize

- Identify user group needs and use cases
- Assess current infrastructure
- Prioritize gaps and evaluate workspace solutions
- Develop a tailored strategy

Assess

- Identify security risks
- Improve device performance
- Integrate AI into workflows
- Maximize uptime and scalability

Deploy

- Select the optimal workspace solution
- Configure hardware and software
- Deploy your environment
- Drive end-user adoption
- Reduce shadow IT with a unified app suite

Upgrade

- Patch and optimize your current environment
- Replace or upgrade assets to improve performance
- Streamline and reduce costs through cloud or hybrid migration

Ready to learn how digital workspaces can help your organization?

Digital workspaces allow you to build scalable, secure, and efficient workplaces that raise the bar for employee experiences.
