

Power Apps

Build innovative apps faster with the Power Platform

Unlock the creative power of your citizen developers with Power Apps – part of the Power Platform.

International Data Corporation (IDC)¹ estimates that there will be about 750 million cloud-native applications by 2025. If your organization doesn't have an app, it could cause you to miss market or customer opportunities, or even miss something happening within your own organization. PowerApps harnesses the power of Copilot and AI tools to empower your workers to create innovative, power apps quicker using drag-n-drop, low-code, and no-code technologies.

Why should you use SHI for Power Apps and the Power Platform?

Kickstart the era of enablement

With easy-to-deploy templates and tools, leveraging the Power Platform, Copilot, and AI, you can create a culture of powerful application development and create apps that engage customers and workers alike.

In our Power Platform Ideation Lab, we will:

- Demonstrate how to quickly create powerful apps using AI, low-code/no-code processes.
- Share valuable insights into strategically implementing Power Apps and the Power Platform throughout your organization, including deploying your new apps at scale with the power of Azure.
- Showcase other Power Platform features that can help take your business into the future - including Copilot and AI-powered solutions.

Benefits

- Unleash innovation by harnessing AI and Power Apps to engage customers and workers alike.
- Streamline processes, reduce manual effort, and enhance operational efficiency with automated apps that your workers create.
- Save money by leveraging your in-house creatives.

Power Automate

Free your workers from redundant tasks and processes by using the Power Platform

Increase efficiency by automating processes with Power Automate – part of the Power Platform.

Your organization likely has established processes for almost everything, but does running and managing these varied processes take up too much time? Now you can get some time back. Power Automate harnesses the power of Copilot and AI tools to automate repetitive tasks. Identify bottlenecks and process inefficiencies with Power Platform Automate Process Mining, so that you can focus on the important tasks that keep your organization up and running.

Why should you use SHI for Power Automate and the Power Platform?

Kickstart the era of enablement

Anyone in your organization can automate their processes with built-in connectors, templates, and tools, leveraging the Power Platform, Copilot, and AI.

Free your workers from boring, redundant tasks and unleash their creativity for more important tasks.

In our Power Platform Ideation Lab, we will:

- Demonstrate how to identify and automate processes using AI and Power Automate process mining.
- Show you how to make your automation even smarter using AI Builder.
- Introduce you to additional components of the Power Platform, so that you can use Copilot, AI, and the Power Platform to solve all your business challenges.

Benefits

- Take the guesswork out of what processes to automate.
- Empower everyone to automate their processes.
- Expand your automation across desktop, mobile, web, and cloud platforms.

Power Pages

Build engaging websites with the Power Platform

Unlock your creative power with Power Pages – part of the Power Platform.

Every organization needs to have a web presence, but how engaging is your website? Is it easy to navigate? Is it providing the user data you need to make decisions? Power Pages harnesses the power of Copilot and AI tools to empower your organization to build powerful, engaging, professional, and secure websites.

Why should you use SHI for Power Pages and the Power Platform?

Kickstart the era of enablement

With easy-to-deploy templates and tools, leveraging the Power Platform, Copilot, and AI, you can create a professional webpage that your customers will love.

In our Power Platform Ideation Lab, we will:

- Demonstrate how to quickly create powerful web pages using AI and low-code/no-code processes.
- Share valuable Power Pages features such as webpage and data security, compliance, and governance.
- Collect business data and insights from site visitors using the power of the Microsoft Dataverse.
- Introduce you to the additional components of the Power Platform, so that you can also use Copilot and AI to solve all your business challenges.

Benefits

- Unleash innovation by harnessing AI and Power Pages to engage customers with a top-notch web presence.
- Develop websites that deliver a 24/7 customer support experience, such as appointment setting, online shopping, and product support.
- Leverage your in-house creatives rather than outsourcing web developers.
- Stay ahead of the curve by using AI-powered Power Platform solutions.

Power Virtual Agents

The power of AI to create great customer experiences using the Power Platform

Quickly build and deploy conversational bots using Power Virtual Agents – part of the Power Platform.

In today's world, it seems like every website has a bot or virtual agent. Now, with Power Virtual Agents, your organization can build and deploy robust, conversational virtual agents for internal and external customers using generative AI and the Power Platform in minutes!

Why should you use SHI for Power Virtual Agents and the Power Platform?

Kickstart the era of enablement

According to Forrester, using virtual agents resolves customer requests 50% faster. Using the Power Platform to build these conversational virtual agents means less waiting time for customers and fewer calls holding in queue for your live agents!

In our Power Platform Ideation Lab, we will:

- Demonstrate how to build, test, and deploy virtual agents using a graphical, low-code, AI interface.
- Show you how to enhance customer engagements with multimedia responses, including images, videos, and preconstructed quick replies.
- Introduce you to the additional components of the Power Platform, so that you can use Copilot, AI, and the Power Platform to solve all your business challenges.

Benefits

- Take the guesswork out of what processes to automate.
- Embed Power Virtual Agents into your web page with Power Pages
- Deploy virtual agents within Microsoft Teams for your internal user needs and conversations.
- Connect Power Virtual Agents to Dynamics 365, so conversations can be handed off to live agents as needed.
- Teach your virtual agents to have more complex conversations using Microsoft low-code Power Fx language.
