Asset recovery services

Comprehensive, compliant, and cost-effective

When phasing out old devices or disposing of end-of-life (EOL) hardware, you must securely wipe all data and avoid sending your equipment to a landfill, where their internal heavy metals and chemicals can pollute the soil and contaminate groundwater. But many organizations are unsure of where to start.

SHI is here to guide you through the process and ensure compliance with environmental and data security regulations. We can arrange to securely collect devices from your premises or deliver custom packaging directly to remote users. We ensure assets are inventoried and assessed and once they're booked, we provide real-time visibility of where your assets are in the disposal process.

Through end-of-lease processing, remarketing, redeployment, donation, or destruction – and with detailed and consolidated reporting through our online portal – SHI's committed to bringing you maximum value so you can focus your time, resources, and finances on critical business operations.

Responsibly recovering and recycling technology

- Boost circular economy
- Ensure data security
- Redeploy old equipment
- Recycle e-waste responsibly
- Extend warranties
- Optimize unused inventory

An environmentally responsible way to dispose of retired IT equipment

Dedicated team of experts
You'll have a dedicated team of SHI-badged asset recovery experts to help you at every step.

Tangible value
Receive value back from your hardware that can be attributed to your SHI account and applied toward your next project.

Detailed reporting
We provide thorough reports, including chain of custody reports and certificates of destruction, as well as photographic evidence throughout the disposal process.

Device grading scale
We provide a value-add transparent grading scale for your hardware, including photographic evidence justifying any low grades.

Environmentally responsible asset disposal
SHI has established R2 e-steward compliant partnerships across the globe.

Our asset recovery services help global organizations fulfill their strategic initiatives

Tackling supply constraints and helping recover costs

Managing end-to-end device lifecycles with skilled IT talent

Refreshing and securely disposing of EOL devices

Supporting hybrid workforces and device sprawl

Effectively managing assets and extending warranties

SHI's 5-step plan to optimize your digital supply chain, transform your IT lifecycle management, and attain your sustainability goals:

1 Recover	**2** Reuse	**3** Resell	**4** Recycle	**5** Lifecycle management
Ensure the highest recovery rates possible with:	Refurbish, redeploy, and extend through:	Achieve maximum resale value from:	Downstream tracking for accountability and transparency with:	Maximize the full device lifecycle with our single solution for:

• Device refresh.
 • Minimal touchpoints.
 • Asset management and tracking.
 • QR code implementations.
 • Secure packaging.
	• Testing, grading and cleaning.
	 • Device repairs.
	 • Re-boxing and assigning.
	 • Destruction.
	 • Serialized auditing.
		• Extensive B2B expertise.
		 • Thorough evaluation of every device.
		 • Flexible payout via:
		   o SHI account credit
		   o Cash back
		   o Carbon credits
			• Commitment to zero-landfill for e-waste.
			 • No export of any equipment.
			 • Environmental impact reports.
			 • E-stewards or R2-certified processors.
				• Break/fix and repair.
				 • Device return.
				 • Asset recovery.
				 • Integration services.
				 • Deployment and redeployment.

When the time comes to phase out old IT equipment, SHI's got your back.
