

## Unified endpoint management (UEM)

To retain talent in an industry short on labor, you need modern devices and tools users actually want to use.

But empowering employees to work where and how they choose while still securely managing your hybrid workplace is a formidable challenge.

SHI stays up to date on the latest IT developments so you don't have to. We help you choose the best management strategy for your distributed devices with implementation, adoption support, and flexible finance options at your disposal.

Our UEM solution provides a unified view and unlocks full control, management, and monitoring across all your end-user devices.

### Proactively improve your device control and management with our UEM platform

- Manage endpoints from anywhere, at anytime with a centralized view
- Secure your devices, applications, and data
- Configure and troubleshoot systems remotely and securely
- Automate patch management
- Deploy software platforms with just a few clicks
- Manage and monitor mobile devices
- Remotely image and deploy OSs across your devices
- Employ zero trust across your organization for your internal accesses and corporate data

#### Solve what's next with our UEM solution:

**Simplified management:** Streamline IT and transform the device experience for your hybrid workforce

**Unified view:** Manage configuration and access policies across your IT landscape

**Secure:** Ensure secure and compliant endpoint management across different technologies

**Flexible pricing model:** Our vendor relationships ensure access to commercial options packaged the way you want

**Right UEM strategy:** Our three decades of experience and 1,000+ certified technical experts help you select the right solution

#### Delivered alongside leading endpoint management platforms:
