Virtual desktop solutions

The modern workplace is defined by on-demand services and hybrid workforces. The traditional desktop strategies of yesteryear are obsolete, and organizations like yours need new ways to meet your manageability, security, and infrastructure requirements.

You require high-performance virtualization solutions that are simple to manage and can deploy and provide secure access to a wide variety of users across devices, locations, and workflow requirements. And you need all this from a solution that'll scale with you as your organization grows.

Following industry best practices and partnering with all major virtual desktop technology providers, SHI's modern workplace experts are uniquely positioned to help you strategize, assess, deploy, and upgrade or migrate your virtual desktop solution to ensure a successful implementation that meets all your business and end-user goals.

Our top virtual desktop partners

CiTRIX®

vmware®

Microsoft

aws

Enhance support and build better employee experiences with SHI

Increase flexibility: Meet fluctuating demands for remote work by quickly spinning up new desktops or app resources.

Secure data: Protect data if devices are ever stolen or compromised. Enable regular, automatic backup with centralization.

Simplify management: Enhance device visibility and delivery while modernizing legacy processes and tools.

Improve productivity: Deliver desktops and business apps to any device, no matter the OS or location.

Ensure compliance: Leverage granular controls to enforce compliance in regulated industries.

Boost your bottom line: Reduce CapEx by transitioning to the cloud. Extend your end-user device lifecycle with thin clients.

Virtual desktop solutions

Rapid technological advances and changing market trends are redefining organizations' end-user computing needs. Virtual desktop solutions are here to meet the challenge.

Rise of hybrid and remote working: Remote work is here to stay and more work than ever has shifted to cloud-based systems. Overseeing IT asset governance, management, and security across disparate networks requires a modern solution.

Age of consumerization: Today's employees are consumers. Employee choice and bring-your-own-device initiatives empower users to choose the technology that enables them to be at their most motivated and productive, wherever they are.

Focus on DEX: Modern workplace support is shifting from an SLA model to an experience level management to proactively monitor and service remote workforces, improving worker sentiment and productivity.

Our experienced teams can plan and deploy scalable, reliable, and secure end-user experiences no matter where your people are or what devices they're using. We can help you to:

Strategize

- Identify use cases based on user groups and related requirements
- Assess existing IT infrastructure
- Identify and prioritize gaps
- Evaluate alternative VDI solutions
- Develop a strategy specific to your needs

Assess and remediate

- Pinpoint security risks and vulnerabilities
- Increase device and workflow performance
- Maximize device and application uptime
- Ensure long-term scalability

Deploy

- Identify your optimal virtualization platform and related hardware
- Deploy your base hardware and software
- Configure your virtualization software
- Test your virtual desktop solution
- Drive end-user adoption

Upgrade and migrate

- Patch your current environment to reduce risk exposure
- Upgrade or replace IT assets to improve performance and supportability
- Streamline processes and reduce costs by migrating to the cloud

Are you ready to solve what's next for your device strategy?

Schedule a brief discovery call today to learn how SHI can help you build a bespoke and effective desktop virtualization strategy.
