

Achieving better consumption and predictable costs in the cloud

Don't overspend on cloud services.

As technology accelerates, modernizes, and progresses, more organizations are turning to cloud services to achieve operational excellence.

While the benefits of the cloud are undeniably valuable, managing and understanding the associated costs can become problematic. In fact, overspending on cloud services is a common problem that can significantly impact your business's bottom line. Given current economic headwinds, it's even more vital this year to keep your costs under control.

Fortunately, there are ways to optimize your cloud costs while also achieving significant savings.

What value can SHI bring?

Get expert guidance about FinOps best practices for managing costs efficiently—without sacrificing performance.

- Save 20-50% of your monthly cloud bill.
- Gain visibility and eliminate your wasteful spend in cloud.
- Understand what resources in the cloud you need to spend on.
- Get custom alerts and automation.
- Receive actionable runbooks.
- Experience AI/ML enhanced reservation management.
- Properly architect and govern your cloud environment.

[The Flexera 2024 State of the Cloud Report](#) investigates the public, private, and multicloud usage of 753 global cloud professionals based on a survey conducted in the winter of 2023. It uncovers both the pressures they're feeling and the strategic initiatives they're utilizing to remain competitive in today's evolving landscape.

Notably, as cloud costs continue to grow, wasted spend remains substantial and budget pressure is increasing. For the second year in a row, managing cloud expenses has emerged as a more pressing challenge than security, reflected in the growing adoption of FinOps teams and associated cost-savings initiatives.
