

SHIELD

Secure your M365 environment, reduce technology overlap, and cut costs

In today's complex threat landscape, many organizations have deployed multiple security solutions, leading to underutilization and overlapping expenses. Enter SHI Environment Lockdown and Defense (SHIELD). Our orchestration platform helps you optimize Microsoft 365 by enabling best-practice security configurations across the ecosystem. With SHIELD, you can minimize the need for overlapping technologies and apply the most suitable licensing type for each user.

Why trust SHIELD?

We recognized the immense value of SHIELD and acquired the technology to bring this powerful solution to all our customers. By integrating SHIELD into our offerings, you benefit from a proven platform designed to streamline your M365 environment, enhance security, and reduce costs.

Cost-effective security

A typical SHIELD setup maximizes the usage of M365 by providing the appropriate level of access and protection for each user. By properly configuring M365 for your users, SHIELD helps you realize the full value of your investment while achieving Microsoft's security best practices.

Additionally, we provide a basis for evaluating other security tools in your environment, allowing you to make informed decisions about your broader security needs.

Don't let your M365 investment go to waste. Discover how SHIELD can transform your cybersecurity strategy, providing unparalleled protection and significant cost savings.

The SHIELD modules

- **Discover:** This module analyzes your usage of the M365 stack at the feature level to determine the types of users in the organization, the level of value you're getting from M365, and recommendations for the optimal licensing configuration.
- **Deploy:** With Deploy, you can configure your enterprise, specialized, and privileged users seamlessly. This module provides architecture as a service, allowing for tailored configurations to meet your organization's unique needs.
- **Defend:** The Defend module enables privileged access workstations, protecting your most sensitive data and operations. By isolating privileged activities, Defend minimizes the risk of security breaches.
