

State of hypervisor briefing

Identify the best platform for your needs.

Many enterprises rely on VMware for their business-critical applications. But as the hypervisor landscape continues to evolve, your company may be considering other options. So, what are the potential paths forward? It's worth thinking about whether a traditional three-tiered architecture, a hyperconverged infrastructure (HCI), or a hybrid cloud model could best meet your future needs.

Fortunately, SHI's team of experts has extensive experience in the hypervisor ecosystem and has conducted a comprehensive, unbiased analysis of enterprise-ready options. Join us for an exclusive briefing where we dive into the exciting updates Broadcom has brought to VMware.

What is included?

In this educational session, we will discuss key considerations for evaluating hypervisors and suggest steps to identify the best platform for your needs. Our comprehensive briefing covers all aspects of hypervisors, such as:

- Management, operations, and supported protocols.
- Hardware and software compatibilities.
- Ecosystem support.
- Migration considerations.

Agenda

- What are the changes to VMware products and licensing?
- What are your options?
- What are the important considerations?
- What can you do next?
- How can SHI help?
- Are there alternative options?

Not only that, we will outline best steps for exploring your options, which may include a discovery workshop and technical deep dives utilizing SHI's Customer Innovation Center.

Whether replacing VMware is your goal or a decision you've already made, SHI aims to educate you on the available options. We'll explore solutions both with and without VMware, enabling you to make informed decisions and develop a strategic plan to move forward.

Contact your SHI account executive today and learn how easy starting your journey can be.
