

Unleash the power of AI with Snapdragon X Elite and SHI

Your AI transformation is finally possible with early access to Snapdragon-powered PCs.

The evolution of AI-powered computing is at a turning point, where creativity, intelligence, and innovation converge. Today's enterprises require devices that not only enhance productivity but also redefine user experiences. Introducing Qualcomm's Snapdragon X Elite: Combined with SHI's strategic services, this solution starts your transformative leap into AI computing. Combined with SHI's strategic services, this solution starts your transformative leap into AI computing. [Secure your 30-day evaluation today.](#)

Transforming collaboration with AI-driven technology

Snapdragon X Elite is redefining AI-driven computing across industries, empowering creative professionals, healthcare providers, financial analysts, field technicians, and more. Its advanced AI engine enhances real-time collaboration, personalized learning, secure telehealth, and productivity—all while supporting hybrid workflows with unmatched battery efficiency.

Centralized IT management with SHI modern workplace services

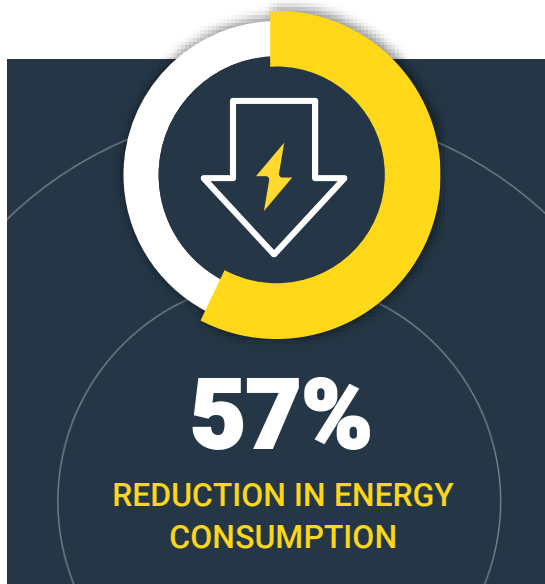

Nowadays, achieving sustainable success in the hybrid workplace means prioritizing user experiences and modern management tools. On this front, SHI helps you select, deploy, and manage new technologies like Snapdragon to deliver rich user experiences, allowing you to work conveniently on any Snapdragon device, anywhere.

We help advance your technology estate securely and sustainably across the entire lifecycle. Our strategy offers a unified approach for comprehensive visibility and control over hybrid IT environments—so you can focus your efforts squarely on future initiatives and not technology troubleshooting.

How we can help

- [Multivendor platform support](#): Streamline efforts while saving time and money on your new investment of Snapdragon PCs.
- [Adoption and change management](#): Harness the full potential of Snapdragon-powered AI devices for modern workflows and test use cases in the SHI AI PC Lab.
- [Configuration and deployment](#) - Ensure your applications for Snapdragon PCs are built to run on ARM systems directly, so you can experience out-of-the box usability.
- [Digital employee experience](#): Create intuitive digital experiences that strengthen the retention and attraction of skilled talent.

AI PC Lab: Your hub for innovation and insight

SHI's AI PC Lab allows customers to experience Snapdragon-powered devices firsthand. Your AI PCs should be tailored to your actual application architecture. That's why our lab offers hands-on evaluations of these solutions, with performance validation for generative AI and tests for energy efficiency. What's more, independent evaluations of Snapdragon devices indicate a **57% reduction in energy consumption**, making them ideal for organizations focused on sustainability. Come try them yourself!

Personalized assessments and actionable insights

Collaborate with our experts in your AI Readiness Assessment: a two-hour engagement led by SHI's applied AI advisory. During this educational and collaborative discussion, we'll evaluate your current systems and processes, identify potential gaps, and deliver actionable solutions to put you on a clear path to effective AI adoption.

Ready to unlock the full potential of AI-driven computing?

Connect now with your SHI account team for an onsite demo and discover how [Snapdragon's AI-driven devices](#) can transform your organization.
