AI Readiness Workshop

Accelerate your AI strategy

At SHI®, we know harnessing AI's full potential requires more than just technology. It demands a clear strategy and organizational alignment. We're dedicated to supporting organizations to imagine, experiment, adopt, and scale generative AI solutions that deliver business results and quantifiable ROI.

Our AI Readiness Workshop is a complimentary 60-to-90-minute interactive engagement designed for broad participation from business leaders and technical stakeholders. This customer-focused engagement prioritizes assessing AI readiness, your current state, providing actionable insights, aligned outcomes, and collaboratively building a strategic roadmap for transformation that drives measurable results across four critical pillars.

Core pillars

Business
Our workshop aligns your AI strategy with your KPIs, business outcomes, value, governance, and workforce readiness. We guide you through prioritizing use cases and development, a roadmap for measurable impact, reduced risk, and long-term transformation.

Data
We benchmark your data architecture for centralization, quality, and governance — laying the foundation for high-impact AI use cases. Robust governance instils trust and ensures consistent, reliable outcomes.

Infrastructure
We review your technology stack and provide infrastructure planning recommendations based on AI use cases and associated workloads to ensure readiness. Our validated designs and best practices enable you to deploy and scale AI with confidence.

Governance and Security
Gain the ability to assess your AI data posture against business objectives, governance guardrails, and industry standards, while evaluating attack vectors and data-usage needs to ensure you can meet demand and defend against evolving security and compliance threats.

> Turn AI strategy into action: Build a clear, prioritized roadmap to transform vision into actionable steps and deliver measurable, sustained success.

Key benefits

Align and educate your team:

- Align to your business goals with prioritized initiatives tied to the KPIs and outcomes that matter.
- Gain critical insight into emerging AI adoption needs, benefits, challenges, and threats.
- Identify how to safeguard your organization with proactive risk management strategies.
- Navigate data and infrastructure requirements for scalable AI workloads.
- Assess your organization's AI literacy and readiness to adopt AI successfully.

Build a plan:

- Develop a tailored, right-sized AI strategy aligned to your business needs.
- Align business and data strategies: Create a unified approach that ties your data capabilities directly to business goals, ensuring every AI initiative delivers clear, measurable ROI.
