

IDCS – Project management services

Accelerate the planning, communication, and management of your infrastructure deployment process.

Project missteps can quickly derail deployment timelines and budgets

When project management is fragmented, delays and budget overruns become common, and stakeholder confusion can escalate rapidly. Without disciplined governance or a clear point of contact, critical issues often go unresolved, and accountability gets lost in the shuffle.

By partnering with SHI's project management services as a part of our integrated data center solutions (IDCS), organizations can:

- avoid costly delays and missed deadlines due to strategic misalignment.
- streamline issue resolution through a single source of contact.
- minimize confusion and unmet expectations as a result of miscommunication and unclear responsibilities.

Clear communication, consistent delivery

End-to-end project management:

We own the coordination, communication, and delivery of the entire lifecycle of your infrastructure project, so the details don't bog you down.

Nothing hidden, everything tracked:

Our detailed reporting dashboards and checkpoints mean all stakeholders receive consistent updates and you're never in the dark on the status of your build.

Simplified vendor coordination:

Our team streamlines the complexity of working with multiple vendors by ensuring tasks are correctly sequenced and dependencies are managed efficiently.

Your trusted partner in infrastructure project delivery

With SHI's project management team leading your projects, you gain a trusted partner dedicated to delivering operational excellence. Whether you're starting a build from scratch, fine-tuning an established architecture, or scaling operations globally, our project managers are with you for the entire lifecycle of your project.

Project management that optimizes every step of your build

With deep expertise in infrastructure deployment, SHI's IDCS project managers take ownership of production planning using detailed logistics and resource data. Their goal: deliver on time and on budget, optimize every step for efficiency, and uphold the highest standards of quality, so your build arrives ready to perform.

Materials management

Because we know every component matters, our experts align material availability with your schedule, creating just-in-time production workflows and carefully mapping each build stage. This proactive approach helps prevent delays, optimize efficiency, and ensure your infrastructure is ready when you are.

Dedicated resources

SHI ensures your infrastructure doesn't stall in a production queue. By securing skilled engineers and technicians early and allocating the right resources from the start, we keep your timelines intact and your deployment on track.

Smart logistics

Our logistics team manages every detail – from coordinating just-in-time production with OEMs and carriers to navigating customs and ensuring direct delivery to your data center, so your infrastructure arrives exactly when and where it's needed.

Agile change management

We can adapt to evolving business priorities and execute physical, logistical, and electrical change requests as needed. By pivoting with precision, we can respond to shifting plans while keeping your deployment on track.
