

Asset tagging and etching

Secure. Track. Simplify.

SHI's asset tagging and etching services help organizations maintain control over IT inventory, reduce loss, and streamline lifecycle management.

Imagine your team is preparing to deploy hundreds — or even thousands — of new devices across multiple locations. You need every laptop, tablet, and phone to arrive not just configured, but clearly marked, secure, and ready to be tracked from day one. That's where SHI's End-User Integration Center (EIC) steps in.

With precision asset tagging and custom etching, each device is labeled with your unique identifiers — whether it's a barcode, serial number, or company logo — ensuring instant visibility and control. It's more than just labeling; it's peace of mind, knowing your assets are secure, your audits are efficient, and your IT operations run smoothly.

Benefits

- **Enhanced security:** Etching serves as a theft deterrent and strengthens brand identity, while asset tags aid quick identification and recovery.
- **Improved inventory accuracy:** Tagged assets streamline management systems, decrease manual errors, and enhance audit readiness.
- **Accelerated deployment:** Tagging and etching are built into configuration workflows, so devices arrive ready to use.
- **Enterprise tracking:** Monitor laptops, desktops, and mobile devices across departments to ensure compliance with serialized asset tracking.

Why SHI?

Real-time asset tracking

Gain complete visibility into device location, usage, and lifecycle status — across offices, remote teams, and global deployments.

Accelerated audits and inventory management

Speed up annual audits and reduce manual tracking with standardized asset identification.

Custom etching options

Add logos, serial numbers, security identifiers, or etched QR codes to devices for branding and theft deterrence.

Integrated with full lifecycle services

Combine tagging with SHI's configuration, imaging, kitting, support, and logistics for a seamless deployment experience.

Global reach

Services available for international shipments, supporting distributed teams and global operations.

ISO 9001:2015 certified precision

Every device is tagged and etched with meticulous accuracy to meet your compliance and operational standards.
