

Imaging

Offload hardware imaging so every user unboxes a secure, ready-to-use device.

Device imaging is a tedious but critical step of your deployments, taking valuable time away from important IT initiatives.

Within SHI's End-User Integration Center (EIC), we can image your devices cost-effectively and at scale, eliminating hands-on work so you can refocus on delivering value for your organization.

Imaging simplified

Significantly reduce setup time with easy device imaging. Our four-step process lets you determine the best way to image devices based on your systems and the level of end-user input. Along the way, we'll rigorously ensure data security.

Why SHI

- Our experts can fully configure up to 5,000 devices daily.
- Compliant with ISO 9001:2015 for consistent, high-quality experiences.
- Ready-to-use devices minimize downtime.

Legacy device imaging

- Transmit your payload to SHI through Secure File Transfer Protocol (SFTP), a dedicated on-prem server, or physical media.
- We apply a standard or custom image based on your requirements.
- We leverage VPN tunnels to domain-join devices and connect them to your environment.

Modern provisioning

Streamlined, cloud-based provisioning that includes, but is not limited to:

- Chrome ZT
- ABM
- Autopilot

Streamline device imaging with SHI's End-User Integration Center.
