

Oracle Java Strategic Health Assessment

Gain visibility, improve data quality, and support informed planning for your Oracle Java environment.

Empower your organization with strategic Oracle Java insights

Preparing for internal reviews, understanding Oracle Java deployments, or managing changes in licensing models can be challenging. SHI's Oracle Java Strategic Health Assessment provides clear visibility into your Java environment and actionable recommendations to help strengthen data accuracy, support decision making, and improve software governance.

What's included in your assessment

- **Comprehensive discovery:** Identify where Oracle and non Oracle Java installations exist across your environment to improve visibility and data completeness.
- **Deployment analysis:** Review Java versions for a set of data and its usage patterns to help support internal planning and governance activities.
- **Evaluation of available alternatives:** Explore potential pathways for Java usage to help inform internal technology strategy discussions.
- **Improvement roadmap:** Receive actionable recommendations aimed at enhancing discovery accuracy, streamlining processes, and supporting more effective Java management.
- **Agreement insights:** High level review of Oracle contract structures and terminology to support understanding of key concepts relevant to your Java environment.

Key benefits for your business

- **Increase reporting confidence:** Identify gaps in Java discovery and strengthen data accuracy before they impact internal reviews or planning cycles.
- **Support informed decision making:** Gain clearer insight into Java deployments to guide future technology and lifecycle strategies.
- **Strengthen governance practices:** Enhance internal processes around Java tracking and reporting, helping teams align with organizational software management goals.
- **Access expert guidance:** Benefit from SHI's experience with Java discovery, deployment patterns, and industry standard best practices.

Who should leverage this assessment?

- Organizations running Oracle Java in their environments.
- IT, software asset management (SAM), and procurement teams involved in Java management or lifecycle planning
- Teams seeking greater clarity around Java usage, deployment, and internal reporting processes
