

IT asset recovery solutions

Offset growing hardware costs by unlocking the hidden value in retired IT assets.

Ongoing supply chain disruption and memory and DRAM shortages are driving higher hardware prices, prolonging refresh cycles, and boosting the residual values of older data center hardware and end-user devices.

SHI helps organizations unlock increased resale value from surplus or aging hardware, creating a tangible offset to rising purchase costs.

How SHI can help

We deliver end-to-end IT asset recovery, combining financial return, security assurance, and full operational transparency. From secure collection to certified data sanitization and resale, we help IT leaders maximize residual value while maintaining strict governance and audit readiness.

Benefits

- **Less refresh pressure:** Recover residual value.
- **Data protection:** Protect your organization with certified data erasure.
- **Improved governance:** Leverage inventory reconciliation, grading, and reporting.

Secure recovery

- NIST 800-88 compliant data sanitization
- Serialized chain-of-custody reporting
- On-site pickup or lockable shipping containers

Resell

- Capture residual value from devices
- Apply recovered funds directly to refresh cycles
- Ensure transparent, standardized device grading
- Redeploy old devices to users within your organization

Dedicated support

- A single SHI point of contact for coordinating logistics and reporting
- End-to-end inventory reconciliation across locations
- Ongoing visibility into assets, value, and resale

Unlock the full residual value of your retired IT assets. Connect with SHI's asset recovery experts to turn surplus hardware into refresh capital.
